

TakeWare® Fusion™

The New Gold Standard

Disaster Recovery in a Box

Fusion™ the new gold standard for fully automated backup, archiving and now offsite backup too!
 - You don't even need to know where your files are to start!

Fusion™ combines the speed and convenience of TakeWare® BackupMaster™ with the utter security of fully automated offsite backup, delivering:

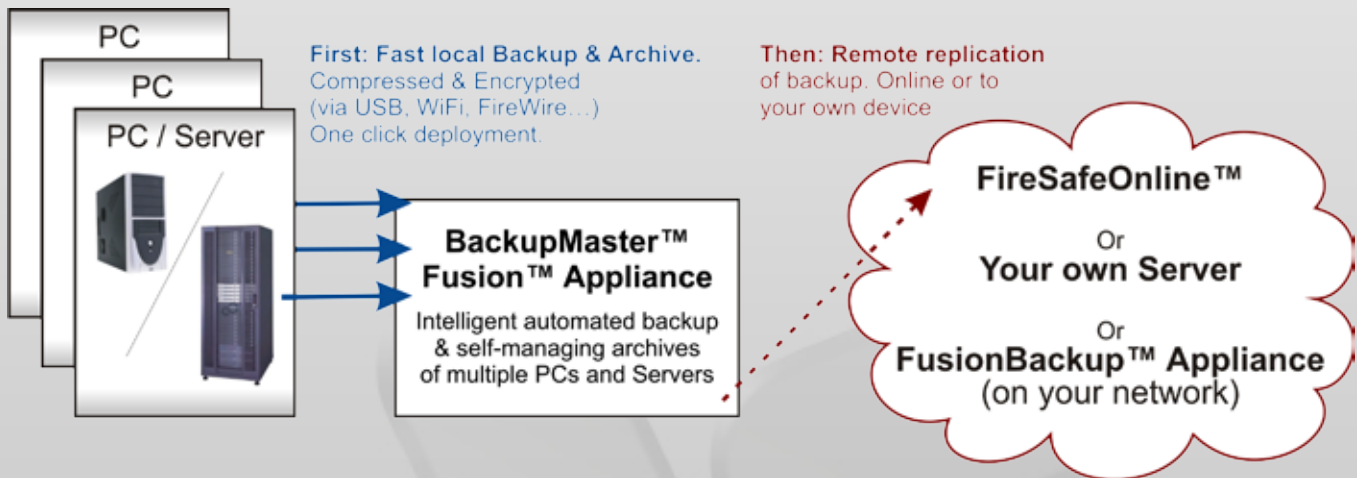

- Fast backup – around fifteen times faster
- Intelligent 'appliance' - Zero install, Zero configuration, one-click deployment
- Unprecedented security reliability and resilience
- Extremely cost effective
- Restoration of even a single file so easy anyone can do it
- Fully Automated archiving and offsite storage

How does it work?

Using TakeWare's patented technology we combine fully automated fast local backup and archiving (from BackupMaster™) with either our FireSafeOnline™ service or your own central backup store (or a FusionBackup™ appliance should you need it).

Backup of each PC / server is on demand or on schedule. Then BackupMaster™ Fusion™ quietly takes over, efficiently replicating your encrypted, compressed data across to your data store – out of harms way.

Any Questions?

- **Does it cost the Earth?** No! Probably less than your existing local or online backup.
- **How does it compare with tape?** It's far faster, more reliable & more robust. All round better.
- **How much physical space does it take?** Not much. From around the size of a PDA. It's also very 'green'.
- **Can it do multiple servers / SQL / Exchange / a.n.other product?** Yes, yes and yes.
- **Can I recover a document I deleted by accident, myself?** Yes, it's easy.
- **Won't it hog my bandwidth and slow everything down?** No. It will use 'spare' bandwidth and you will probably never know it's there!
- **How many archives does it keep?** As many as you like, you can have Terabytes of them.
- **Can I configure the backup myself?** Yes - if you want to - or allow our intelligent profiles to do the work.
- **Isn't this all too good to be true?** Well it looks that way, but it isn't. We have years of experience - not to mention a patent.
